Diagnostic and Interventional Catheterization in Congenital Heart Disease

Diagnostic and Interventional Catheterization in Congenital Heart Disease

Cardiac catheterization has long been a central diagnostic modality in the evaluation of children, adolescents, and adults with congenital heart disease, and in children with acquired heart disease. Over the past two decades, transcatheter interventions have become equally important in the treatment of pediatric and congenital heart disease. Some transcatheter therapies have become established as the standard of care for congenital cardiovascular anomalies previously managed surgically, others serve to supplement surgery in the integrated management of complex lesions, and still others are in their infancy, as pediatric interventional cardiology continues to advance in step with the broader field of pediatric cardiovascular medicine.

Since the previous edition of this book, new technologies and techniques have been introduced to the field of pediatric interventional cardiology, much has been learned about established transcatheter therapies, and there has been a substantial increase in the volume of published data on outcomes of transcatheter procedures in congenital and pediatric heart disease. With increasing experience, the role of interventional catheterization has become solidified as an integral component of the comprehensive management of patients with essentially all forms of congenital heart disease. Cardiac catheterization has also become established as a distinct subspecialty within the discipline of pediatric cardiology, and at many centers has become the purview of cardiologists who have received specialized training in interventional catheterization and whose practice is focused on catheterization. This book is targeted to trainees and established interventional cardiologists alike, and is intended as a comprehensive reference for the clinical practice of diagnostic and interventional cardiology in pediatric and congenital heart disease.

In the organization of this book, a combination of procedure-based and problem-based approaches has been employed. The structure of the book has been updated to make it more reader friendly, chapters have been added to address new techniques and problems in the field, and greater emphasis has been placed on evaluation of outcomes of transcatheter interventions in congenital heart disease.

Section 1 covers the fundamentals of cardiac catheterization, with chapters devoted to pre-procedure patient evaluation, sedation and anesthesia, vascular access and related issues, catheterization equipment and its use, hemodynamic evaluation, angiography, radiation and radiation safety, and echocardiography in the catheterization lab.

Sections 2 through 4 include procedure-based chapters that are organized according to the technical type of intervention. Section 2 is devoted to transcatheter interventions for obstructive lesions, including valvar stenoses and vascular obstructions. Section 3 includes chapters that cover interventions to close various pathologic intracardiac communications and vascular anomalies. Section 4 includes chapters covering interventions performed to create or enlarge intracardiac communications, as well as other interventions.

Section 5 focuses on the applications of catheterization and transcatheter interventions in the evaluation and

management of specific patient populations. This problem-based or patient-based focus, which is substantially expanded from the previous edition of the book, reflects the expanding role of catheterization in the comprehensive management of pediatric and congenital heart disease, and addresses emerging applications of transcatheter interventions, including management of the patient receiving extracorporeal circulatory support, hybrid transcatheter-surgical interventions, and prenatal cardiac intervention.

Section 6 includes two chapters that cover outcome assessment and regulatory issues pertinent to the pediatric cardiology in general and interventional cardiology in particular.

From reader reviews:

William Gannaway:

Nowadays reading books become more than want or need but also turn into a life style. This reading habit give you lot of advantages. Associate programs you got of course the knowledge the rest of the information inside the book that will improve your knowledge and information. The details you get based on what kind of reserve you read, if you want get more knowledge just go with schooling books but if you want truly feel happy read one using theme for entertaining like comic or novel. The Diagnostic and Interventional Catheterization in Congenital Heart Disease is kind of reserve which is giving the reader unforeseen experience.

Mary Jones:

Reading a book tends to be new life style with this era globalization. With studying you can get a lot of information that can give you benefit in your life. With book everyone in this world could share their idea. Books can also inspire a lot of people. Many author can inspire their reader with their story or their experience. Not only the storyline that share in the textbooks. But also they write about the ability about something that you need example of this. How to get the good score toefl, or how to teach children, there are many kinds of book that exist now. The authors these days always try to improve their proficiency in writing, they also doing some exploration before they write for their book. One of them is this Diagnostic and Interventional Catheterization in Congenital Heart Disease.

Jessica Kelly:

Reading a book to get new life style in this season; every people loves to examine a book. When you go through a book you can get a lot of benefit. When you read publications, you can improve your knowledge, simply because book has a lot of information upon it. The information that you will get depend on what sorts of book that you have read. If you would like get information about your examine, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, this sort of us novel, comics, in addition to soon. The Diagnostic and Interventional Catheterization in Congenital Heart Disease provide you with new experience in examining a book.

Eva Lynch:

Reading a guide make you to get more knowledge from this. You can take knowledge and information from the book. Book is prepared or printed or created from each source that filled update of news. On this modern era like at this point, many ways to get information are available for an individual. From media social just like newspaper, magazines, science book, encyclopedia, reference book, fresh and comic. You can add your knowledge by that book. Ready to spend your spare time to spread out your book? Or just searching for the Diagnostic and Interventional Catheterization in Congenital Heart Disease when you desired it?
