This new text features a compilation of clinical cases that use a problem-based approach to illustrate the clinical significance of the subdisciplines of anatomy. Seven separate sections present anatomy in a regional format. A series of related questions and accompanying answers follow each clinical scenario, probing your understanding of the clinical issues relevant to that body region.

- Presents information in seven sections to correspond with a regional approach to anatomy: head and neck, back, thorax, pelvis and perineum, upper extremity, and lower extremity.
- Covers the subdisciplines of anatomy including anatomic pathology · cell biology · embryology · gross anatomy · histology · neuroanatomy · and radiologic anatomy.
- Includes references to Gray's Anatomy for Students, and follows a parallel organization, making it easy to use both books together.
